CopyTrust — First Run

3.0 build 50 · 17 October 2026

Cards copied to every destination at once, verified, with all artifacts, proxies and a P5 archive. Companion to the **CameraCard preset** demo.

Run it

1. **Load the CameraCard preset** — Inline verification, all artifacts and proxies.
2. **Add the cards** — drag them in, or click them in the Volumes pool.
3. **Add the destinations.** Two or more is the fan-out case.
4. **Leave** `Copy` **on** `Simultaneously`. `In series` is the relay chain, a different job.
5. **Tick** `Create proxies` **and** `Archive to P5` per destination row.
6. **Turn** `Auto` **on** if you added more than one card.
7. **Check preflight**, then `Start` and read the pre-copy review before files move.

After it starts

Cards copy one at a time — *Simultaneously* means the destinations, not the cards. Counts are **file copies**: 47 files to two destinations counts toward 94. When copying ends the cards are free; artifacts, proxies and P5 continue in the background, so leave CopyTrust open. Finish with **Review Summary**, then **End Session**.
